

iControl
CommandFusion

iControl is a **NEW** approach to home and commercial automation. We use the intelligence that is embedded in your equipment to provide seamless control the eZi way.

Automation systems are designed to simplify our lives by bringing together various components such as lighting, distributed audio, displays, DVD's and decoders etc. The user is removed from the individual systems by a user interface such as a universal remote control or touch panel.

The OLD control system method was via a central processor with programs written to communicate to each of the devices. The information would be duplicated in the processor and be available on a user interface. As technology has advanced, the devices have become more "intelligent". The NEW automation systems simply take advantage of this ability to communicate and allow the user interface to interact directly with each device resulting in great system independence. No central processor – no catastrophic system failures - no expensive hardware to maintain. With the added benefit of reduced wiring.

So whether your next project is a new build or retrofit your choice should be

By using industry 802.11x wifi as a communication medium, iControl provides a scalable solution to your automation requirements.

A comparison table of the various disciplines is shown below to illustrate how reliable and cost effect iControl is.

Training

Dealers are invited to our regular free training seminars.

Please contact your sales person to book a seat.

Note that reservations are on a first come first booked basis.

Limited seats are available.

iPad Docking Stations

iLED have the perfect answer to using an iPad as a touch panel. iPad combined with iRoom motorised in wall docking stations provide the ease of use required for home automation systems. These beautifully crafted products are a must in creating a professional system. Available in Landscape and Portrait. White and Black.

Automation the eZi way

iLED has over 25 years combined experience in designing automation systems. Let us assist in specifying your next project

- Lighting with Astronomic clock option
- Swimming Pool and Sprinkler systems
- Distributed Audio
- Distributed Video including HDMI
- Room device control (Displays, PVR, DVD, tuner)
- Theater (Displays, motorised screens, AV receivers, curtains and blinds)
- Intrusion detection
- CCTV
- Intercom Interface
