Wall Sanitiser Holders

Sanitiser holders to accommodate many different bottle shapes. We have a number of the most popular bottle shapes in our standard range that accommodate bottles of up to 65mm in diameter. Holders are available in black or white powdercoat or stainless steel. Lockable or open.

For custom colors or designs please contact sales@iled.co.za

Foot Pumps

BioSafe have a growing range of sanitiser footpumps professionally designed and beautifully finished in either epoxy powder coat or stainless steel. The mechanisms are robust and reliable, designed for industrial use.

The foot plates are manufactured from 4.5mm steel to provide a solid foundation. Mounting holes have been incorporated to allow bolting to the floor. The holes are located to prevent tripping over the bolt head and shaped to allow alignment.

For installations where security is a concern, use the lockable versions – these can be ordered with key alike for large orders.

For custom colors or designs please contact sales@iled.co.za
