BioSafe Pro

Sanitiser Tunnels – Permanent

BioSafe Pro tunnels are manufactured from epoxy powder coated mild and galvanised steel with emphasis on modularity to improve site installation. The structure has large visible surfaces, perfect for branding.

BioSafe Pro tunnels are the delivery mechanism for specially formulated disinfectant providing long lasting protection against corona virus, influenza, herpes simplex, salmonella and many others as determined by the sanitiser manufacturers guide.

[Refer to BioSafe Sanitiser Buyers guide.](#)

Pressure up to 70 bar combined with microjets incorporating non drip technology deliver 80ml of tiny droplets between 10 to 30 µm creating a dry mist. Due to the sedimentation speed of the atomized disinfectant the droplets penetrate hidden corners providing long lasting protection. Dry mist is electronic friendly and will not damage cell phones.

BioSafe Pro tunnels are supplied in 2 models, each designed to suit a particular application and traffic volume.

Optional accessories include instruction stands, cloud based monitoring with real time GPS location, equipment status and alarms, sanitiser level and use rates, people counter, temperature and humidity.

- **Safe – No PPC required**
- **Walk through Sanitising**
- **Fully automatic**
- **CE Certified sanitisers available**
- **Effective for up to 18 hours**
- **Various tunnel models**
