## No Contact Wall Thermometer For Offices

BioSense is a unique contactless infrared thermometer sensor that measures body temperature accurate to within 0.2°C. in 0.5 seconds at a distance of up to 10 centimeters. Simply walk toward the device, when you get close, it will display your body temperature. A light indicates pass or fail with an audible prompt. No need for an operator with hand held thermometer, no embarrassing conversations or contact of any sort. This unique responding unit is the answer to fast and efficient measurement of temperature at the entrance to buildings.

Use stand-alone or integrate to access control systems including sanitiser dispensers and turnstiles. Efficient entry screening to protect your staff and keep visitors safe.

Pro version includes a Cloud software with a statistics dashboard. Next, see if you can book your place on the order list, reach out to us on [sales@iled.co.za](mailto:sales@iled.co.za).
